Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-32, drawn to a magnetically powered conveyor, classified in class 198, subclass 619.
- II. Claim 33, drawn to a method of bonding, classified in class 156, subclass 299.

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as a bonding method for fastening plates together. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
